NEW, TABARD STYLE, CLOTHING

PROTECTORS

Design with Dignity

Bibetta is showcasing its innovative, range of clothing protectors at Naidex South 2010 (stand F46). Uniquely created from the high performance material, *neoprene*, the collection will be headlined by the new tabard style, clothing protectors. . The new, over the shoulder shape and coordinated bindings provide a subtle and dignified look to the tabards. The garment's improved bias binding is also more durable, making the tabards ideal for prolonged use in professional environments.

Highly respected for the award winning range of UltraBib™ children's bibs; Bibetta has utilized the superior performance of neoprene to create its range for the healthcare industry. Traditionally used in the making of wet suits, neoprene is 100% waterproof, wipe-clean, durable and machine washable. Simple, smart and comfortable, the designs are stain proof, even following continued use.

Bibetta also manufactures its clothing protectors from 'Bioprene™', a professional grade, anti-bacterial neoprene material which kills most bacteria upon surface contact, including MRSA, to ensure a sterile product at all times.

All Bibetta's clothing protectors have a fold out pocket and are highly durable and so offer excellent long-term value to care homes, hospitals and private users. Ergonomically shaped to allow easy arm movement, the range has three snap fastener positions to ensure a good fit. They all roll up for convenience and storage and are virtually crease proof.
